*Apache Ranger*

# What is Collate?

## Vision

Empower data teams  
to build and manage  
high-quality data assets

## Solution

AI Powered Platform to Unify Data  
Discovery, Observability and  
Governance

Built on the open source  
project OpenMetadata

## Who we are

Creators of Apache Hadoop,  
Apache Atlas and Uber Databook

Founders at Hortonworks

Creators of OpenMetadata

# What is Trino?

Trino is a *ludicrously fast*, open source, distributed, massively parallel processing, SQL query engine designed to query large data sets from one or more disparate data sources.

# What is Apache Ranger?

**Apache Ranger** is a centralized security framework providing unified policy management, fine-grained access control, and comprehensive auditing across various systems.

# Trino + Collate + Apache Ranger = True Governance
